"User," for Products licensed on a per user basis, is defined as the maximum number of connections to the Software at any one instance in time; therefore, when an individual has multiple connections, each connection is a User. A multiplexing front end, such as a transaction manager, does not reduce the number of connections from the clients to the multiplexing front end, rather than the smaller number of connections from the multiplexing front end to the database. Licensee can license any number of Users for a Product, provided that this is at least the required minimum number of Users per CPU for such Product. "CPU" means the central processing unit microprocessor in a system.

Important: This Software contains serial numbers, which are required to install and register IBM software. Each installation of IBM software requires use of a different serial number. The serial numbers are only to be used with media received from IBM that has the exact same part number as is noted herein.

Third parties may copyright portions of this software, as set forth in the documentation.
